EDUCATION

New York University, New York, NY | B.A. Computer Science | *Minor in Business Studies*

Sept. 2023 – Dec. 2026

EXPERIENCE

Gartner

Dallas, TX

Salesforce Developer Intern

May 2026 – July 2026

- Delivered 22 story points per sprint, consistently exceeding the team's expected velocity of ~10 story points
- Developed custom Lightning Web Components with loading states to improve responsiveness during asynchronous data retrieval
- Redesigned a core workflow by introducing staged saves, reducing task completion time from 90 to 15–20 minutes.
- Conducted exploratory analysis of an undocumented system area and presented findings to engineering and executive stakeholders

Hopscotch Labs

New York, NY

Full Stack SWE Intern

Sept. 2025 – Dec. 2025

- Architected a full-stack user mention system using Scala backend services, SQL persistence layers, and iOS client infrastructure
- Built a backend parsing pipeline that extracted markdown-formatted mentions from content and indexed mention records with TTL
- Developed data-migration backfill scripts to retroactively populate mention records for existing content prior to feature rollout
- Engineered mention-aware content delivery logic that dynamically prioritized showing tagged posts to users during feed retrieval
- Developed custom iOS mention UX including “@” trigger detection, friend-scoped autocomplete search, and SwiftUI components

iOS Intern

June 2025 – Aug. 2025

- Integrated backend version validation endpoints into the iOS application to support forced and suggested client update workflows
- Implemented custom SwiftUI modals enforcing mandatory (blocking) version upgrade for clients on unsupported versions
- Developed dismissible in-app prompts for recommended application updates based on server-side version policies

Server Intern

Jan. 2025 – May 2025

- Tested and documented server APIs in Postman: added and update endpoints to improve internal developer tooling / QA workflows
- Built and maintained admin dashboards using JavaScript, SQL, and HTML for managing keywords, mentions, user vectors, etc.
- Implemented dynamic admin tooling features including client-side filtering, autocomplete functionality, and efficient data viewing
- Developed a vector embeddings pipeline for UGC and user entered keywords to fuel semantic content recommendation workflows
- Engineered cosine similarity matching and keyword canonicalization logic to improve content relevance and consolidate synonyms (e.g. “LA Dodgers” → “Los Angeles Dodgers”)
- Updated content-ranking and personalization logic to prioritize relevant content based on user keyword similarity thresholds
- Improved recommendation explainability by dynamically generating contextualized content tied to matching user interests

SKILLS

Programming Languages: Apex, C, C++, Java, JavaScript, Python, Scala, SQL, Swift, HTML & CSS

Frameworks & Libraries: LWC, React, Node.js, Firebase, NumPy, Pandas, SwiftUI

Tools & Platforms: Docker, Git, Heroku, OpenAI API, Postman, Salesforce

VOLUNTARY POSITIONS or Conferences or Training or Extracurricular

1st Place @ Stack The Future Chemistry-Themed Schrodinger Hackathon

Jan. 9th 2026

- Built a “Tinder-style” dashboard for chemicals, allowing researchers to input preferences and receive ranked chemical matches
- Designed and implemented a user preference system with persistent storage, onboarding flow, and editable profile-based settings
- Implemented dynamic matching logic to surface compatible compounds based on interactive user feedback (e.g., ‘swiping right’)

3rd Place @ Plastic Labs x Flowglad Hackathon

Aug. 30th 2025

- Built an AI-powered Discord bot that simulated Dungeons & Dragons podcast characters using transcript-trained agentic models
- Integrated [Honcho.dev](#) models with Discord bot infrastructure to generate context-aware character dialogue and gameplay
- Implemented payment and access infrastructure using Flowglad for subscription management and authenticated bot downloads

President of Computational Neuroscience and Machine Learning Club

Jan. 2025 – Dec. 2025

- Led presentations explaining research done by industry experts (Kadkhodaie, Kaiser, Kidger, LeCun, Sussillo, Shazeer, Touvron)
- Explained fundamental Machine Learning concepts to other students (gradient descent, ridge regularization, neural networks, etc.)
